

## APPLICATIONS – Citrus 6000

<b>Floors</b>	If using a bucket and mop – 1 cup to a bucket of warm water
<b>Painted Walls</b>	Better than sugar soap. Between 5:1 to 10:1 depending on how bad the soiling.
<b>Decks</b>	Use as a prep before oiling or just to clean. 10:1 is normally strong enough
<b>House Exteriors</b>	Can either be used as a spray – 20:1, or through pressure cleaner (PC). For professional house cleaners – Sierra recommends putting 2 litres of Citrus 6000 along with 2 litres of chlorine into an empty 20 litre container, then fill the remaining 16 litres with water. Apply this mixture through PC at up to 40:1
<b>Concrete</b>	As above, but through PC at 20:1. Alternatively, if oil is present, then apply neat to worst areas, let dwell, and agitate with a brush. Then rinse with a PC. (note: oil will always leave a shadow)
<b>Brickwork</b>	Same as House Exteriors and Concrete
<b>Public Areas</b>	Usually 10:1 brushed or sprayed on, left to dwell for 2 minutes then rinsed off, for general cleaning of equipment – use a wash mix similar to “Floors”
<b>Motorcycles</b>	Great for cleaning dirt bikes. Use 3:1, spray directly to cooled engine and parts. Let dwell for a couple of minutes, then rinse off. If red dirt is present, agitate with a brush after spraying. Rinse as normal. Road bikes too.
<b>Auto Detailing</b>	Spot Cleaning Carpet & Fabric – 3:1. General interior 5:1 In all cases, let dwell for a minute or two first. Seats, console, dash, pedals, steering wheel and doors. Engine degreasing 1:1 to 3:1
<b>Fabric</b>	Great as a pre spray before washing 3:1. Spray on, rub fabric against itself, and then wash.
<b>Carpet</b>	Normally spot clean 3:1. When used professionally – use at ¼ normal dilution.
<b>Workshop Floors</b>	Neat, agitate with a broom, then rinse. If using regularly, then dilute 10:1
<b>Marine</b>	Seats (3:1 to 5:1), covers, decking 5:1 to 10:1) fish boards, 3:1 and agitate then rinse
<b>Buses – Interior</b>	15:1 for all surfaces. Floors, seats, doors etc. Can be used to remove exhaust soot 10:1
<b>Hire Equipment</b>	Varied – between 3:1 to 10:1. Removes soil, oil, soot, grease etc.
<b>Truck Tautliners</b>	5:1 to 10:1 Spray on, agitate with a soft broom, rinse off.
<b>Food Processing Equipment</b>	as with Conveyer Belt cleaning.
<b>Restaurants/Cafes</b>	Very popular, because Citrus 6000 is food grade and will replace several chemicals into one – Spray & Wipe, floor cleaner, spot cleaner – chairs, walls. Splash Back cleaner for kitchen.
<b>Pressure Cleaning</b>	Extremely popular. Dosage varies according to job. Refer to House Exterior for general use
<b>Property Management</b>	Similar to Restaurants. Replaces so many other chemicals, and usually out performs as well. Food Grade is often important too.
<b>Earthmoving</b>	Cleans, degreases, removes red dirt staining. Cabin interior – same as auto interior
<b>Mining Equipment</b>	Same as auto interior. Again, because it is food safe, and yet so strong, very well accepted
<b>Schools</b>	Floors, walls, decking, bus interiors, exercise equipment (although not a sanitizer)
<b>Child Care</b>	Dilute 10:1 and very safe – walls, floors, equipment etc.
<b>Caravans</b>	All interior aspects of caravans.
<b>Brake Dust</b>	Easily removes brake dust. Spray 10:1, agitate with a soft brush, and hose off.
<b>Outdoor Furniture</b>	Spray all over at 10:1, let dwell for a couple of minutes, then hose or wipe off.

The uses are endless. Often people want an exact dilution rate for a particular application. This is difficult because it depends on how bad the soiling is, the type of soiling, and how porous the surface is, so these are a guide.
